

AI that's powerful, accountable, and designed to last.

VERA is an AI consulting firm. We help companies figure out where AI fits, integrate it into their operations, and make sure it holds up over time. Strategy, integration, and governance, done right.

WHAT WE DO

Strategy

Where AI fits, what to build, what to skip. A roadmap leadership can act on.

Integration

AI woven into the work your team already does. Real systems shipping, not pilots.

Foundation

The architecture and policies underneath. Built to last through scale and regulation shifts.

1:1 AI Coaching

Private sessions with you or your leadership team. Build AI fluency at the top, not just the tech team.

WHAT YOU ACTUALLY WANT

01

Make money from AI, not just spend on it.

Revenue lift, margin compression, faster sales cycles. AI without a business case is a hobby.

02

Get your time back.

AI handling the work that fills your calendar but doesn't move the needle. Your hours, back for the work only you can do.

03

Stay ahead, not chase.

While competitors thrash through vendor demos, you're shipping. While they pilot, you're operating.

04

Cut through the AI hype.

10,000 AI vendors, 9,500 selling vapor. Know what's real, what isn't, and exactly where to spend.

OUR VISION

"I started VERA because AI is going to change the workforce at an unprecedented pace, and many companies are not prepared for it. We believe in using AI to strengthen human capabilities and being transparent about both the risks and the opportunities ahead."

Brett Ponters, Founder

Let's talk about what AI can do for you.

We take a small number of engagements. If you're serious about AI, we'd like to hear from you.
