

AI that's powerful, accountable, and designed to last.

VERA is an AI consulting firm. We help companies figure out where AI fits, integrate it into their operations, and make sure it holds up over time. Strategy, integration, and governance, done right.

WHAT WE DO

Strategy

We assess what's feasible, map it to your infrastructure, and write the plan. Architecture, evaluation criteria, governance, and timeline.

Integration

We help AI integrate into your processes seamlessly. Foundationally built to scale through time.

Governance

Policies, evaluation frameworks, and operational processes that account for where regulation is heading, not just where it is today.

WHAT WE HOLD TO

01

Research-grounded

Every recommendation traces back to published research, tested benchmarks, or proven production patterns.

02

Responsibly powerful

AI that's capable enough to make a real difference and reliable enough to trust.

03

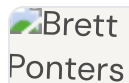

Transparent

We're honest about what works, what doesn't, and where the real risks are so you can make informed decisions.

04

Built to stay ahead

We plan for where AI and regulation are heading, not just where they are today.

OUR VISION

"I started VERA because AI is going to change the workforce at an unprecedented pace, and many companies are not prepared for it. We believe in using AI to strengthen human capabilities and being transparent about both the risks and the opportunities ahead."

Brett Ponters, Founder

VERA

VALUE-DRIVEN, ETHICAL, RESEARCH-GROUNDED AI
